WALDWICK, NEW JERSEY 07463

November 30, 2021

Dear Parent/Guardian:

Re: School Water Testing Results

This letter is to update you on the district's continued efforts regarding testing for lead in the schools' water supply. Independent testing was performed by Omega Environmental Service on the water at all four campuses. There was no evidence of elevated levels of lead at Crescent. At the High School/Middle School, there was one source found to be above the recommended level: a water fountain in the High School Girls Locker Room. At Traphagen, one of the water fountains in Building 5 (Media Center) was found to be above the recommended levels. Water has been turned off at these sites. A new filter water fountain has been ordered for the Girls Locker Room. Since Building 5 is scheduled for renovations as part of the referendum, this water fountain will continue to be turned off until it is replaced with the renovations. Students can use other classroom water fountains.

We will continue to monitor all areas and follow state protocols with regards to testing and recommendations.

Sincerely,

Dr. Paul D. Casarico
Superintendent of Schools
